Finality has been withdrawn, and the following rejection has been made:

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Israni (U.S. 6438561 B1) in view of Cohen (U.S. 5999934).

3. Regarding claim 1, Israni teaches (figures 1-3 and 14-16) a method of transmitting digitally coded traffic information, wherein said digitally coded traffic information includes a digitally coded traffic message having a standard format containing first location information, method comprising: providing a leading header in front of traffic message; providing at least one additional information portion following the traffic message; and providing additional location information in the additional information portion adding to and/or changing the first location information.

4. Israni does not teach a header indicating that at least one additional information portion follows.

5. Cohen teaches (column 18, lines 18 – column 19) a header indicating that at least one additional information portion follows. It would have been obvious to one of ordinary skill in

the art to adapt to Irani's system Cohen's concept of a header indicating that at least one additional information portion follows to maintain quality of service in the system.

6. Regarding claim 2, Israni teaches (column 13) the header includes means for encoding the traffic message.
7. Regarding claim 3, Israni teaches (figures 12 and 13) the additional information portion is divided into classes and each class comprises a class indicator and at least one data packet.
8. Regarding claim 4, Israni teaches (figures 12-13) each class includes a class length following the class indicator and leading the data packet and class length designates results of a count the data packets following the class length.
9. Regarding claim 5, Israni teaches (figures 12-13) the data packet comprises type indicator and information entities.
10. Regarding claim 6, Israni teaches (figures 12-13) the number of required packets is fixed in each class.
11. Regarding claim 7 and 9, Israni teaches (column 5, lines 44-60) standard format is coded according to a TMC method.

Art Unit: 2665

12. Regarding claim 8, Israni teaches (figures 1-3 and 14-16) a radio receiver for reception and analysis of digitally coded traffic information including a digitally coded traffic message having a standard format, the message comprising first location, comprising: a receiving stage including means for receiving traffic information, means for analysis of a leading header provided in front of the message, and means for evaluation of additional information portion to ascertain any additional location information contained within, the additional location information consisting of changing and/or additions to the first location information.

13. Israni does not teach a leading header indicating the presence of at least one additional information portion following the message.

14. Cohen teaches (column 18, lines 18 – column 19) a leading header indicating the presence of at least one additional information portion following the message. It would have been obvious to one of ordinary skill in the art to adapt to Israni's system Cohen's concept of a leading header indicating the presence of at least one additional information portion following the message. to maintain quality of service in the system.

15. Regarding claim 10, Israni teaches (figure 2) a processor including a memory for only standard text information and means for detecting the additional location information in the additional information portion.
